

**POWER HOUSE®**

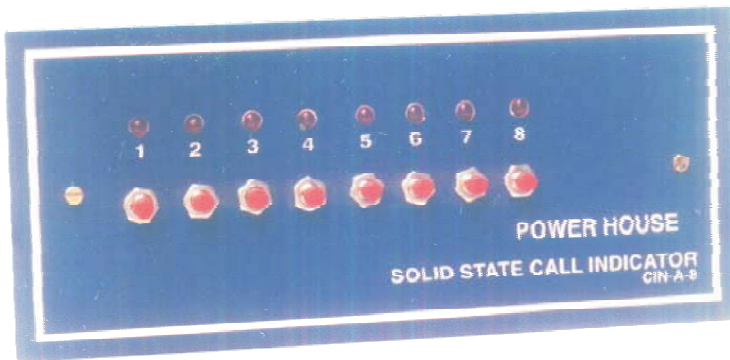

## SOLID STATE CALL INDICATOR

**POWER HOUSE Solid State Call Indicators** for Offices, Chambers, Hotels, Houses etc. where one or more attendant is supposed to attend number of Executives customer, occupant etc.

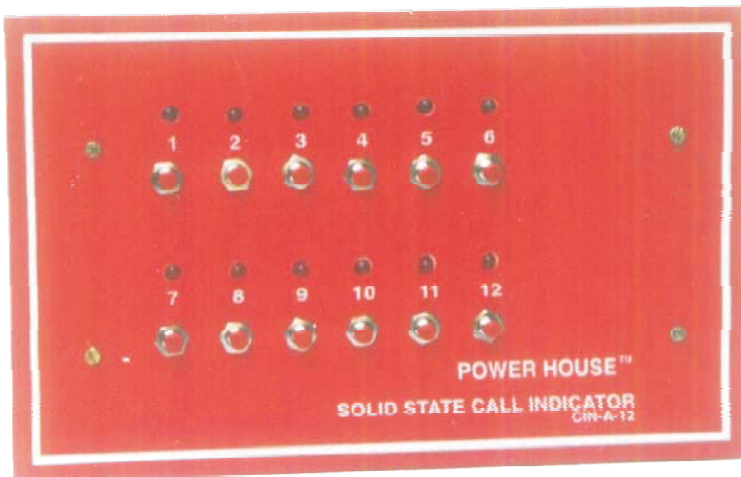

The system is designed to replace conventional electro-mechanical buzzers- switch indicator assembly. In these systems, whenever the call is made, a magnet coil pulls an arm which in turn activates a switch assembly switching the Indicator on. The magnet coil is designed for 1-2 sec. operation. But if some one keeps the bell push pressed for a little long time, or the bell push remains shorted for a while, the coil gets burned out resulting in chances of fires.

The Power House Solid State Call Indication system does not have any coil /switches or relays. The signal received is sensed by a electronics circuitry. It activates a LED to indicate the call station number. Constant or repeated call signals does not effect its internal working in any way. The call can be re-set by push on the indicator board. It has a soft tone buzzer which sounds for a pre-set time on receipt of each signal. **Elegant in look** these indicators match the sophistication and decor of the place.

With No Moving Parts, Magnet Coil, these are **maintenance free** device and totally **safe from fire Hazards**.

Installation and **wiring is very simple**. These can just replace the conventional call indicators without any major changes in wiring.

Special models with Sealed Maintenance Free, batteries and with built in CC/CV chargers are available. Non-attendance Timer Digital Display, Single Reset, Remote Reset, Battery Backup are also available.

Model No.	No. of Ways	Approx size(mm)	
		Cover	Cut-out
CINA01	1	96x96	80x80x50
CINA04	4	152x102	135x80x50
CINA06	6	230x102	135x80x50
CINA08	8	230x102	210x80x50
CINA12	12	242x152	210x150x60
